

Professional Grade Freezer Cold Room for Safe and Hygienic Storage of Goods

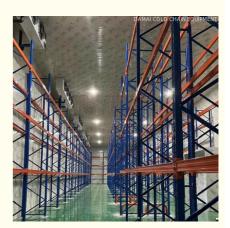

Basic Information

Place of Origin: CHINA
Brand Name: DM
Certification: CE;ISO
Model Number: DM-1

 Minimum Order Quantity:

Price: \$2000~\$100000
Packaging Details: Wooden case
Delivery Time: 30 Work days

Payment Terms: T/TSupply Ability: 300000

Product Specification

• Machinery Test Report: Provided

• Material: PU(Polyurethane)

Condenser Type: Air Cooled/Water Cooled

Usage: Cold Storage Defrost Type: Electric Defrosting

Voltage: 220V, 380VSize: Any Size Is Ok

Panel Material: High Density PU Foam

Professional Grade Freezer Cold Room for Safe and Hygienic Storage of Goods

Product Description:

With the use of cold storage technology, many companies can safely transport and store temperature-sensitive products with ease. As a helpful assistant, cold storage plays an important role in preserving the quality and safety of various essential products.

Features:

Easy installation: The installation of cold storage equipment is convenient and fast, with simple connection of indoor and outdoor units with pipes and the equipment can start working immediately after switching on the power. For instance, micro cold storage is relatively cost-effective to install and operates stably with low maintenance costs.

High degree of automation: Cold storage equipment usually consists of a microcomputer control system, which enables accurate temperature control, simple operation, and multiple automatic protection devices. This makes it convenient for users to observe the temperature inside the warehouse, ensuring optimal storage conditions.

Wide applicability: Cold storage is suitable for the storage needs of various items, from meat, aquatic products, poultry, and eggs to dairy products, fruits, vegetables, and more. For example, small cold storage can meet different temperature requirements and is widely applicable to various industries.

Technical Parameters:

Temperature Range:

Cold Storage: The temperature range is 2-8 , mainly used for storing vegetables, fruits, medicine, eggs, etc.

Freezer: The temperature range is -5 to -25, mainly used for food storage, ice cream, fish, shrimp, seafood, and meat preservation.

Quick Freezing Warehouse: with a temperature below -25, mainly used for quick freezing and preservation of meat, seafood, etc.

Library Structure:

Storage Board: Commonly used storage boards include polyurethane board and polystyrene board. Polyurethane board has a high density and good thermal insulation performance, but its price is relatively high; Polystyrene board is lightweight and cost-effective. **Thermal Insulation Materials:** Commonly used thermal insulation materials include polyurethane foam materials, which have good thermal insulation properties.

Refrigeration Equipment:

Refrigeration Compressor Unit:

Air Cooler:

Electromagnetic Valve and Expansion Valve:

Warehouse Door Specifications: The common warehouse door specifications are 1000 * 2300mm, with a semi-buried door design, anti-fog and anti-condensation functions, tight sealing, and long service life.

Control System:

Electronic Control System: usually adopts a button screen+PLC control system.

Temperature Display: used for real-time monitoring and control of temperature inside the warehouse.

Applications:

Cold Room Freezer is designed for a variety of usage scenarios, such as in hospitals, laboratories, and restaurants. It is also ideal for use in food processing plants, supermarkets, and warehouses. This product is available in two condenser types: Air Cooled and Water Cooled, making it suitable for different environments and requirements.

The features PU Panels that provide excellent insulation and durability. The machinery test report is provided, ensuring that the product is in excellent working condition. The alarm system includes both temperature and power failure alarms, ensuring that any issues are quickly identified and resolved.

The packaging details include a wooden case, ensuring that the product is protected during shipping. The delivery time is 30 work days, and payment terms are T/T. The supply ability is 300000, making it easy to order and receive this product quickly and efficiently. In summary, the DM-1 Cold Room Freezer is a versatile and affordable solution for a wide range of cold storage needs. With its high-quality construction, certifications, and alarm systems, it is an excellent choice for those who require reliable and efficient cold storage solutions. Whether you need a freezer for a restaurant or a warehouse
