

Efficient customization Cold Room Evaporator Air cooler With High blower

Our Product Introduction

Basic Information

- Place of Origin: China
- Brand Name: DM
- Certification: CE ISO
- Model Number: DM-DD80
- Minimum Order Quantity: 1
- Price: 1000-100000
- Packaging Details: Customization
- Delivery Time: 20day
- Payment Terms: TT, L/C
- Supply Ability: 300000/Year

Product Specification

- Heat Transfer Efficiency: High
- Cold Room Type: Blast Freezer
- Storage: Low Temperature Storage
- Power Supply: 220V/380V/415V
- Temperature: High, Medium, Low Temperature
- Casing: Steel Plate With Plastic Spray
- Application: Cold Storage/Cold Room/Freezer Room
- Coil Tube: Copper
- Highlight: 220v cold room evaporator,
380v cold room evaporator,
220v freezer room evaporator

Efficient customization Cold Room Evaporator Air coolerWith High blower

Product Description:

D Series Air Cooler for Cold Storage

D series air cooler is a cooling and refrigeration equipment that is highly suitable for use in various cold storages, such as civil cold storage or combined cold storage. It comes in three different types: DL, DD, and Dj, each of which is capable of catering to cold storages with different storage temperatures.

The D series air cooler has several advantages, including its compact structure, light weight, and ability to not occupy the use area of the cold storage. It also provides uniform storage temperature and high efficiency, which enables it to quickly cool the food stored in the cold storage and significantly improve the freshness of the stored food.

Features

Characteristics of D Series Air Cooler

The D series air cooler is a type of equipment used for cooling and refrigeration in warehouses with Freon refrigeration units. Depending on the temperature, it is divided into three series: DL, DD, and DV, which can be respectively applied to different warehouse temperatures.

The DL type air cooler is mainly suitable for temperature-keeping warehouses around 0°C, while the DD type air cooler is mainly suitable for cold storages at 18°C. On the other hand, the DJ type air cooler is mainly suitable for quick-freezing warehouses below -25°C.

This series of products is specially designed for preservation, freezing, and refrigeration. The shell is made of high-quality steel plate, which is sprayed and corrosion-resistant. The coils are arranged in a staggered way, using mechanical expansion to make the copper tube and aluminum sheet tightly combined, ensuring a good heat exchange effect. The high-quality stainless steel electric heating tube is evenly distributed in the coil, and the defrosting effect is good. The cooling fan has a reasonable design width and sufficient effective air volume due to the spacing between the fan blades and the aluminum fins being greater than 1/3 of the fan blade diameter.

Moreover, long-distance air ducts can be used according to the customers' requirements.

DD Type ceiling air cooler technical parameters (DD80)		
NUMBER	Item	Parameter
1	Refrigerating capacity	14900W
2	Nominal area	80
3	Volume	13.5L
4	Fan Number	2
5	Fan diameter	500mm
6	Air Volume	11000m³/h

Applications:

Looking for reliable and efficient cooling equipment for your business? Look no further than these refrigeration units. Ideal for commercial refrigeration, freezing, and cold storage, they are designed to provide cool temperatures and are suitable for use in supermarkets and other large spaces.

These units are versatile and can be integrated with different types of cooling systems. They are especially useful in commercial settings where temperature-sensitive products need to be kept chilled for extended periods of time. With their robust design and durability, they are an essential component for any business looking for reliable cooling equipment.

Whether you need to keep dairy products, meat, or beverages chilled, these refrigeration units will ensure your products stay fresh and at the optimal temperature. Plus, with their energy-efficient technology, you can save on energy costs over time, making them a smart investment for any business.

Packing and Shipping:

Product Packaging:

The Cold Room Evaporator will be packaged securely in a sturdy cardboard box.

The product will be wrapped in protective material to prevent any damage during shipping.

Each package will include an instruction manual and any necessary parts for installation.

Shipping:

The Cold Room Evaporator will be shipped via a reputable courier service such as FedEx or DHL.

Shipping times may vary depending on the destination, but typically take 3-5 business days.

Customers will be provided with a tracking number to monitor the shipment's progress.

Shipping fees will be calculated at checkout and are based on the destination and weight of the package.
