Product Description:

Air-Cooled Condenser

An air-cooled condenser is a type of radiator facility that is paired with cooling equipment to decrease temperature. Three different types are currently available: H, V, and U. The H type is designed for side-blowing, whereas the V and U types are created for roof-blowing.

This condenser has been constructed with a reasonable structure and excellent interchangeability, which allows it to be equipped with a wide variety of compressors. Furthermore, there are a variety of window fins that can meet the demands of various customers.
