## Product Description

### Product Description:

Our air coolers, also referred to as air-cooled evaporators, represent high-performance heat exchange units specially developed for use in cold storage and refrigeration systems. These units effectively remove heat from the storage space by circulating cold refrigerant through internal copper tubes and aluminum fins, thus helping maintain stable low temperatures.

We provide a diverse selection of models to cater to different capacity requirements, and all our products can be personalized to align with your specific project needs — from adjusting overall dimensions to varying copper tube thickness — ensuring that they perfectly match your exact specifications.

### Features:

**Efficient Heat Exchange:** High-quality aluminum fins and internal grooved copper tubes ensure fast and uniform cooling.

**Quiet Operation:** Low-noise axial fans provide powerful airflow with minimal sound.

**Anti-Corrosion Materials:** Surface-coated casing and corrosion-resistant coils extend product lifespan even in humid or salty environments.

**Easy Installation & Maintenance:** Compact design, accessible panels, and standard mounting holes reduce installation time.

**Full Customization:** Dimensions, fan size, fin spacing, copper tube thickness, and casing materials can all be tailored to your specific needs.

**Defrosting Options Available:** Electric, hot gas, and water defrosting systems can be configured according to your environment.
